TENS Unit FDA Approved

Tens Units and Electrotherapy Devices: This type of stimulation is characterized by biphasic, low volt, current and selectable parameters such as pulse rate and pulse width. TENS Units stimulates sensory nerves to block pain signals, stimulate endorphin production to help normalize sympathetic function.

What is TENS?

T.E.N.S stands for Transcutaneous Electrical Nerve Stimulation. It's is a drug-free alternative for managing pain. For the past twenty years, doctors have been prescribing it as an effective way to relieve pain. It offers many people safe comforting relief. It reduces and often even eliminates pain. It is FDA approved, and it is reimbursable by most insurance providers.
