

Hot Water Therapy Pump TM Products

The Aqua Relief System introduces a breakthrough treatment for pain and muscle stiffness.

The Aqua Relief System is a therapeutic pain management and circulatory improvement system to be used by patients either in the home or during their hospital visit. It's an all-in-one system that combines heat therapy and cold therapy, allowing you to reduce edema/swelling, improve blood circulation and treat pain. It is ideal for the treatment of sore, stiff, nagging muscle or joint pain. Athletes with chronic pain or injuries may use heat therapy before exercise to increase the elasticity of joint connective tissues and to stimulate blood flow.

The Aqua Relief System is a therapeutic pain management and circulatory improvement system to be used by patients either in the home or during their hospital visit. It's an all-in-one system that combines heat therapy and cold therapy, allowing you to reduce edema/swelling, improve blood circulation and treat pain. Athletes with chronic pain or injuries may use heat therapy before exercise to increase the elasticity of joint connective tissues and to stimulate blood flow.

Hot water therapy aqua-relief system introduces a new break through in diabetic care and pain relief.

The 3rd generation ARS system

About the device

- Cold or Hot water is circulated all around the joint providing optimal 360 degree treatments.
- System can provide cool water for 3-4 hours, or hot for up to 12 hours.
- Can be set at 38i F or 107i F
- Aqua Relief System reduces chances of skin damage by continuously circulating the fluid.
- Provides added compression to further reduce pain and inflammation.
- The machine is re-usable.

Features

- Hot cold therapy improves blood circulation and reduces edema/swelling
- Hot therapy reduces pain and discomfort of neuropathy
- Effective for pain relief in joints and muscles
- Wide selection of therapy pads for all areas of the body
- Medicare Approved

The Pain Management Benefits:

The natural therapy Aqua Relief System delivers relief for arthritic pain, carpal tunnel syndrome and many other nerve pain and circulatory conditions. The system is a versatile hot/cold pack that will help for both systemic pain conditions as well as part specific pain conditions (knee, back, wrist, shoulder, etc.) A setting of 107i F is particularly useful to provide deep penetrating therapeutic heat therapy.

The Diabetic Benefits:

The Aqua Relief System uses both 107i F water to help improve blood circulation in the hands and feet and 38i F cold water to reduce swelling and help with wound healing for the diabetic patient.

Diabetes often leads to peripheral vascular disease that inhibits a person's blood circulation. With this condition, there is a narrowing of the arteries that frequently leads to significantly decreased circulation in the lower part of the legs and the feet. Poor circulation contributes to diabetic foot problems by reducing the amount of oxygen and nutrition supplied to the skin and other tissue, causing injuries to heal poorly. Poor circulation can also lead to swelling and dryness of the foot. Preventing foot complications is more critical for the diabetic patient because poor circulation impairs the healing process and can lead to ulcers, infection, and other serious foot conditions.

Other benefits:

Safe, controlled, and time-saving to both the patient and the care giver. Custom pads, booties and mitts allow for treatment of circulatory and pain problems to all parts of the body.

The Medicare Program

The Aqua Relief System is covered by Medicare. You may be eligible to receive a system at little or no cost to you. A prescription is required.

Accessories Available

- Single Boot
- Universal Therapy Pad
- Standard Single Bootie
- Standard Double Booties
- Large Single Bootie
- Large Double Booties
- Large Back Pad (13" x 24")

Aqua-Relief - Hot

What exactly does Heat do?

- Heat improves circulation.
- Heat improves cell function (metabolism).
- Heat decreases stiffness in tendons and ligaments.
- Heat relaxes the muscles and decreases muscle spasm.
- Heat lessens pain.

Aqua-Relief - Cold What exactly does Cold do?

Cold therapy with ice is the best immediate treatment for acute injuries because it can reduce

swelling and pain. Ice is a vasoconstrictor (causes the blood vessels to narrow) and it limits bleeding at the injury site. Apply ice to the affected area several times a day.

Cold water therapy is also helpful in treating chronic pain.

Indications

Arthritis, sore muscles, reduce edema swelling, achy hands and feet.
